

Printing PDF documents

You can print the entire document, specify a range of pages, noncontiguous pages, or a particular page area to print before opening the dialog box.

To print a PDF document:

1. If you don't need to print the entire document, do one of the following:
 - To select pages to print, click thumbnails in the Thumbnails palette. You can Ctrl-click (Windows) or Command-click (Mac OS) thumbnails to select non-contiguous pages, or Shift-click to select a contiguous range of pages. You can also select a contiguous page range in the Print dialog box.
 - To select an area on a page to print, select the graphic select tool, and drag on the page to draw the area you want.
2. Choose File > Page Setup to set general printing options. The available options will vary with different printers and drivers. See your printer driver documentation for details.
3. Click the Print button, or choose File > Print. Specify the printer, page range, number of copies, and other options, and click OK. Most of the options are the same as they are for other applications, but note the following:
 - Selected Pages Or Selected Graphic (Windows) or Selected Thumbnails/Graphic (Mac OS) prints only the pages or page area you selected before opening the Print dialog box.

MORE:

Now to get to the thumbnails, for selecting pages it might be confusing. In Acrobat Reader, click on Window, then thumbnails. All the pages will show up on the left hand side of the screen.

I hope this is what you are talking about.
